Preface

The concept of an Essential List of Medicines is based on the principle that Essential Medicines are integral components of health systems, playing a significant role in the delivery of healthcare services by addressing healthcare needs of the majority of the population in line with the Universal Health Coverage (UHC). They are carefully selected based on the evidence of safety, efficacy, cost, cost-effectiveness, and disease prevalence. Besides, they should always be available in appropriate dosage forms and strengths within health service delivery.

Recognizing the crucial role of Essential Medicines in service delivery, the World Health Organization (WHO) developed the 1st model list of essential medicines in 1977. The list contains medications considered most effective and safe for meeting the most important needs within a health system. It aims to assist Member States in selecting and procuring essential medicines by ensuring good quality at reasonable costs. Hereafter, the list is updated every two years, and is widely accepted by countries to develop their own national list of medicines. Since its inception, the model list has proven to be a powerful tool for promoting healthcare services by rationalizing the selection and use of medicines as well as their costs.

Introducing the concept of essential medicines by countries is intended to be flexible and adaptive to the national contexts. It is the prerogative of national governments to decide which medicines are to be regarded in the National Essential List of Medicines.

Following WHO's recommendations, Eritrea developed its 1st National List of Medicines in 1993. Since then, the list has been updated every three to four years. As a result, the number of medicines in the National List has slightly increased with the objective to accommodate the evolving demands of healthcare providers and to align with new developments in healthcare.

As a follow up to the previous activities, the Ministry of Health is pleased to present the 8th edition of the Eritrean National List of Medicines, prepared in consultation with all categories of health professionals and stakeholders. The current edition reflects the policy of the Ministry of Health on appropriate procurement of efficacious, quality, safe, and cost-effective essential medicines. Adherence to this list in procurement, manufacturing, prescribing, and dispensing is a legal obligation. Similar to the previous editions, all items are categorized by Level of Use, and classified as Vital, Essential, or Necessary (VEN).

In conclusion, I would like to congratulate the Pharmacy Services Division, the National Medicines and Food Administration, the National Medicines and Therapeutic Committee (NMTC), and the ENLM Review Subcommittee for their hard work and sustained commitment throughout the preparation of the 8th edition of the Eritrean National List of Medicines.

Introduction

The Eritrean National List of Medicines (ENLM) defines the range of medicines available to importers, manufacturers, distributors, prescribers, and dispensers in Eritrea. It also outlines the level of use of these medicines in different health facilities. The preparation of this list is based on the treatment of choice for the most common diseases and medical conditions in the country, with evidence of safety, efficacy, cost, cost-effectiveness, quality, and availability serving as the main criteria for selection.

In Eritrea, the concept of essential medicine was adopted in the late 1980s during the struggle for independence, and the first basic list of essential medicines was developed in 1988. The first edition of the Eritrean National List of Medicines, a successor to the Basic List of Essential Medicines used during the struggle for independence, was published in 1993 after liberation and was widely circulated. Subsequent editions - the 2nd, 3rd, 4th, 5th, 6th, and 7th - were published in 1996, 2001, 2005, 2010, 2015, and 2019, respectively.

The purpose of regular revisions of the ENLM is to address changing disease prevalence, evolving treatment modalities, the introduction of newer medicines, and the identification of unfavorable risk-benefit profiles of existing medicines. As in previous revisions, review forms were distributed to health professionals across various disciplines, and a considerable number of suggestions for addition, deletion, changes in level of use and VEN classification were received, compiled and evaluated.

A key component of this revision is the development of standard operating procedures with clear criteria for the addition, deletion, changes in the level of use, and VEN changes. The role of the level of use is paramount in optimizing the safe use of medications and

enhancing the healthcare referral system. It provides a structured approach to ensure that medicines are appropriately utilized within various healthcare settings.

Meanwhile, the VEN classification plays a crucial role by impacting the procurement and distribution processes, thereby prioritizing essential medications within the healthcare supply chain. During the review process, evidence-based practices, expert consultations, and specific disease guidelines were employed to reinforce these functions.

An ENLM review sub-committee analyzed and reviewed all applications submitted by healthcare professionals and other stakeholders. The subcommittee compiled technical data from scientific literatures and conducted comparative analysis of the medicines submitted against existing or other similar medicines based on safety, efficacy, cost, and cost-effectiveness. This data was then made available to the National Medicines and Therapeutics Committee (NMTC) and later to participants of the consensus-building workshop held at Orotta Hospital Conference Hall from November 26 - 27, 2024. The recommendations from individual working groups were discussed in the plenary session, leading to the final list being prepared through general consensus. During this revision, 157 items were added, 79 items were deleted, and the level of use of 179 items and the VEN category of 2 items were changed.

A notable additional feature of this edition is the introduction of clear distinctions between the levels of use for health centers (2B) and community hospitals (2A). Moreover, restriction remarks in the footnotes for certain medicines, which aim to facilitate their safe and effective use, have also been introduced.

The Eritrean National List of Medicines (ENLM), used in conjunction with the Eritrean Standard Treatment Guidelines (ESTG) and the Eritrean National Formulary (ENF), is expected to be a valuable tool for promoting the rational use of medicines.

Acknowledgement

The preparation of the 8th edition of the Eritrean National List of Medicines is the outcome of a series of consultations and teamwork of various experts. This process involved multiple steps, incorporating input from all categories of health professionals and key stakeholders. It was initiated by preparing and distributing review application forms to health professionals, followed by the collection of their feedback. As a result, a considerable number of suggestions for medicine addition, deletion, and change in level of use and VEN classification were received from health workers across all sectors.

These suggestions were compiled and analyzed by a technical working group specifically established for this review process. The findings were then presented to the National Medicine and Therapeutic Committee (NMTC) for further review. The NMTC thoroughly reviewed the draft document and organized a consensus-building workshop for its endorsement and finalization.

Therefore, the Ministry of Health, and particularly the Department of Medical Services, would like to recognize and acknowledge the dedication and commitment of the Pharmacy Services division and the National Medicines and Food Administration staff, the National Medicines and Therapeutics Committee, and the ENLM Review Subcommittee.

Special thanks are also extended to the Global Fund and the WHO country office for their logistical support throughout the process of reviewing and publishing the Eritrean National List of Medicines.

Additional Updates

In the previous version of the Eritrean National List of Medicines, the classification for the Level of Use was as follows:

1 - For use in all health settings

2 - For use in health centers and higher health care levels

3 - For use in all hospitals

S - Specialty medicines: to be used in special cases and be kept only in the highest referral hospitals

For the new version, the classification has been updated to enhance clarity and specificity:

1 - For use in all health settings

2B - For use in health centers and higher health care levels

2A – For use in community hospitals and higher health care levels

3 - For use in all hospitals

S - Specialty medicines: to be used in special cases and be kept only in the highest referral hospitals

In addition, to promote the safe use of medicines, **a restriction for use** has been included as a footnote in the newer version. This change aims to ensure that all healthcare providers are informed of the appropriate contexts for medication use, thereby enhancing patient safety and treatment efficacy.

Presentation of information in the ENLM

Classification of Medicines by Level of Use

The following keys indicate classification of level of uses to be adhered to:

1 - For use in all health settings

2B - For use in health centers and higher health care levels

2A – For use in community hospitals and higher health care levels

3 - For use in all hospitals

S - Specialty medicines: to be used in special cases and be kept only in the highest referral hospitals

VEN Classification

V - Vital medicines: They are either lifesaving, crucial for provision of basic health services. These medicines are of the highest therapeutic importance.

E - Essential medicines: They are effective against less severe or serious but nevertheless significant forms of illness.

N - Necessary medicines: They are used for minor or self-limiting illness, or of questionable efficacy or with a high cost for marginal therapeutic benefit. These medicines are of the lowest therapeutic importance.

Certain products have been designated as ‘**Restricted use**’ in the footnotes to allow for their safe and effective use. For example, items restricted to certain programs or health conditions and items restricted to certain health condition at a particular level of use.

Medicines and dosage forms are listed in **alphabetical order** within each section and the order of listing does not imply preference for one form over another. Eritrean Standard treatment guidelines and national formularies should be consulted for information on appropriate dosage forms.

Explanation of dosage forms

Term	Definition
Tablets (qualified)	Refers to a specific type of tablet: Chewable - tablets that are intended to be chewed before being swallowed; Dispersible - tablets that are intended to be dispersed in water or another suitable liquid before being swallowed; Scored - tablets bearing a break mark or marks where sub-division is intended in order to provide doses of less than one tablet;

	Sublingual - tablets that are intended to be placed beneath the tongue. The term 'tablet' is always qualified with an additional term where one of the following types of tablet is intended: gastro-resistant (such tablets may sometimes be described as enteric-coated or as delayed-release), prolonged-release or another modified-release form.
Capsules	Refers to hard or soft capsules. The term 'capsule' without qualification is never intended to allow any type of modified-release capsule.
Granules	Preparations that are issued to patient as granules to be swallowed without further preparation, to be chewed, or to be taken in or with water or another suitable liquid. The term 'granules' without further qualification is never intended to allow any type of modified-release granules
Oral liquid	Liquid preparations intended to be swallowed i.e. oral solutions, suspensions,

	emulsions and oral drops, including those constituted from powders or granules, but not those preparations intended for oromucosal administration e.g. gargles and mouthwashes.
Injection	Refers to solutions, suspensions and emulsions including those constituted from powders or concentrated solutions.
Injection (qualified)	Route of administration is indicated in parentheses where relevant.
Injection (oily)	The term 'injection' is qualified by '(oily)' in relevant entries.
Intravenous infusion	Refers to solutions and emulsions including those constituted from powders or concentrated solutions.
